

NLP Project 7: Hotel Review Analysis

Problem Statement

A hotel management company collects customer reviews from booking websites and travel platforms to understand guest experiences related to room quality, staff behavior, cleanliness, food service, and amenities. Analyzing these reviews manually is challenging because of the large amount of feedback received from customers. The company wants to apply NLP techniques to analyze guest reviews, measure customer satisfaction, and identify areas that require service improvement.

Tasks

1. Collect hotel review data.
2. Preprocess guest reviews.
3. Perform sentiment analysis.
4. Identify service-related issues.
5. Generate customer satisfaction report.
