

NLP Project 11: Job Resume Screening

Problem Statement

An HR department receives hundreds of resumes for different job openings. Manually reviewing each resume to identify suitable candidates requires significant time and effort. The organization wants to use NLP techniques to automatically process resumes, extract important skills and qualifications, and shortlist candidates based on job requirements to make recruitment more efficient.

Tasks

1. Collect resume dataset.
2. Preprocess resume text.
3. Extract skills and qualifications.
4. Match resumes with job roles.
5. Generate candidate shortlist.
