

NLP Project 5: Social Media Comment Analysis

Problem Statement

A company regularly launches products and marketing campaigns on social media platforms where customers share comments, opinions, and reactions. Understanding public sentiment and customer perception is important for brand reputation and business growth. Since social media generates huge volumes of unstructured text data, the company wants to use NLP techniques to analyze customer comments, identify trending topics, and understand overall public opinion about its products and services.

Tasks

1. Collect social media comments.
2. Clean and preprocess text.
3. Perform sentiment analysis.
4. Identify trending topics.
5. Visualize public opinion.
