

NLP Project 9: Student Feedback Analysis

Problem Statement

A college collects feedback from students about subjects, teaching methods, classroom activities, and overall learning experience. Since feedback is collected from many students across different departments, manual analysis becomes difficult and time-consuming for the administration. The institution wants to use NLP methods to analyze student feedback, identify common concerns, and improve the quality of education and student satisfaction.

Tasks

1. Collect student feedback data.
2. Preprocess feedback text.
3. Perform sentiment analysis.
4. Identify common student concerns.
5. Prepare improvement suggestions.
