

NLP Project 10: Banking Complaint Analysis

Problem Statement

A bank receives customer complaints related to transactions, loans, online banking services, and account management through emails and support portals. Due to the high volume of complaints, customer support teams find it difficult to manually review and categorize every issue quickly. The bank wants to develop an NLP-based complaint analysis system that can identify common banking problems, classify complaints, and help improve customer service efficiency.

Tasks

1. Collect banking complaint data.
2. Preprocess complaint text.
3. Categorize customer complaints.
4. Identify frequent banking issues.
5. Generate analytical report.
