

NLP Project 8: Product Feedback Analysis

Problem Statement

A retail company has recently launched new products and receives customer feedback through surveys, online forms, and e-commerce platforms. Customers share opinions regarding product quality, pricing, packaging, and usability. The management wants to analyze this feedback efficiently to understand customer expectations and improve product performance. NLP techniques can help automate feedback analysis and provide meaningful insights for business decisions.

Tasks

1. Collect product feedback data.
2. Preprocess feedback text.
3. Analyze customer sentiments.
4. Identify product improvement areas.
5. Generate business insights.
